

Quality Heating Systems

Turn to the Experts.™

The leader in furnace design. Carrier heating systems are trusted in more homes than any other brand. With a heritage of innovative engineering with unsurpassed standards of excellence that spans more than century, we continue to be at the forefront, specializing in the design of customized high-efficiency home comfort systems. We test and retest our

products beyond industry standards to make sure homeowners are receiving the best solution for their comfort and energy-efficiency needs.

With today's gas furnace technology, you can be more comfortable in your home and save money on your utility bills. High-efficiency furnaces (90%+ AFUE) utilize a secondary heat exchanger which allows the furnace to extract more heat from the gas, thus creating the higher efficiency rating.

Concerns over corrosion

The gas vapors that pass through the secondary heat exchanger create a corrosive byproduct. All high-efficiency furnaces with 90% AFUE or above, regardless of manufacturer, are susceptible to damage from this highly acidic condensation occurring inside them. To ensure high performance year after year, we take extra precautions to protect critical parts from corrosion and protect the investment that homeowners have made.

The Carrier advantage

To secure a high standard for performance and quality with our furnaces, Carrier patented the use of polypropylene to prevent corrosion in our furnaces. It is with this exclusive right to use one of the most corrosion-resistant substances available that we are supremely confident in both the form and function of our high-quality, high-efficiency furnaces. This patented technology makes our furnaces:

- + Certified to exceed the industry standard for corrosion.
- + Less susceptible to clogging than other furnaces which leads to better airflow which leads to greater energy efficiency.
- + Easier to maintain.

Innovation without compromising safety

At Carrier, product safety is as important as product performance. That's why we design our furnaces with many automatic features to ensure safe operation, even if a problem were to occur. Our family of residential furnaces has a long history of high consumer satisfaction.

WARRANTY

Carrier

Carrier furnaces are backed by a 5-year limited warranty. However, our Serpentuff™ secondary heat exchangers are backed by a lifetime parts warranty and a 20-year labor warranty. Extended warranties are also available. Ask your Carrier expert dealer for details.

Patented technology protects our Serpentuff™ secondary heat exchanger from corrosion.
